EDUCATION

Erasmus University Rotterdam, the Netherlands

Nov. 2013 – 2018 (expected): PhD Candidate, Economics

- Dissertation: *Essays in Public Economics*, advisor Bas Jacobs
- Research interests: public economics, corruption, optimal taxation, macroeconomics
- My PhD was partially funded by a grant from the Dutch Academy of Sciences (NWO)

Tinbergen Institute, the Netherlands

2011 – 2013: MPhil Economics (Research Master)

- Thesis: *Optimal Capital Income Taxation with Liquidity Constraints*, advisor Bas Jacobs
- Specialisations: Macroeconomics and Empirical Microeconomics.
- Partial scholarship for the first year (€2,200), full scholarship in the second year (€12,000)

Utrecht University, the Netherlands

2008 – 2011: BSc (Hons) Economics and Business (*cum laude*)

- Thesis: *A Cross-Sectional Analysis of the Optimal Scale in Banking*, advisor J. A. Bikker
- Specialisations: Monetary and Financial Economics, International Economics.
- Graduated from the multidisciplinary Honours Programme (30 ECTS)
- GRE scores: Quantitative 790/800 (91st percentile), Verbal 610/800 (88th percentile)

RESEARCH PROJECTS

Do Romanian hospitals buy from the highest sponsor? (in progress)

I investigate whether pharmaceutical companies that sponsor doctors in Romanian public hospitals are more likely to receive procurement contracts from those hospitals. I create a unique dataset of the universe of procurement contracts and pharmaceutical sponsorships and create a detailed picture of the links between hospitals and pharmaceutical companies.

Why is the Long-run Tax on Capital Income Zero? Reinterpreting the Chamley-Judd Result (with Bas Jacobs)

The Chamley-Judd result is a cornerstone in the literature arguing against capital income taxation. We show that the intuition for this result follows from standard public finance theory and that the steady-state assumption is more important than previously thought.

Optimal Capital Income Taxation with Heterogeneous Returns (with Bas Jacobs, Aart Gerritsen, Kevin Spiritus)

Empirical evidence suggests that due to market imperfections, returns to capital can vary across agents and be correlated with ability. Using theory and numerical simulations, we study how capital income taxes can be used to strike a balance between taxing rents in capital returns and distorting individual decisions.

Optimal Capital Income Taxation with Liquidity Constraints (Master thesis, advisor Bas Jacobs)

We investigate the trade-offs arising when taxing capital income in the presence of borrowing constraints. We show using theory and numerical simulations how liquidity constraints limit the scope for capital income taxes, but can also lead to higher labor supply.

PRESENTATIONS (SELECTION)	<p>ISEO Summer School, Iseo, Italy, 2017</p> <p>Conference of the Romanian Academic Economists (ERMAS), Cluj-Napoca, Romania, 2015</p> <p>IIPF Summer School, Warsaw, Poland, 2015</p> <p>European Economic Association (EEA), Toulouse, France, 2014</p> <p>International Institute for Public Finance (IIPF), Lugano, Switzerland, 2014</p> <p>Erasmus University Rotterdam PhD seminar, the Netherlands, 2014</p> <p>Workshop on Economic Theory (EBIM), Bielefeld, Germany, 2014</p>
